

For Washer Disinfectors and Autoclaves in Dental Practices

Compact, cost-effective and easy to use water purification system to meet the very latest medical standards, including:

HTM2030/2031, NHS MES c32, EN15883, MDA/HIS

Concern over infection control and the spread of MRSA, CJD and other resistant pathogens means that the cleaning and sterilising of reusable medical equipment is becoming increasingly regulated by industry guidelines and international standards.

ELGA LabWater has developed the Biopure 7/15 to help minimise the risk to patients and deliver compliant purified water at the point of use, for a wide range of washer disinfectors and autoclaves.

The Biopure is tailor-made for dental practices:

Designed to save space

The Biopure's compact size means that it can be positioned under a bench, wall mounted or fitted into a conventional dental cabinet.

The unit is supplied with a wrap-around storage reservoir which cradles the Biopure and removes the need for a bulky reservoir.

Cost-effective

The Biopure provides the convenience of on-demand pure water at a price comparable with purified bottled water. Additionally the unit is more cost-effective and more environmentally friendly than traditional distillation units.

Biopure water on demand

Delivers 7 or 15 litres per hour to ensure continuity of supply.

Latest technology

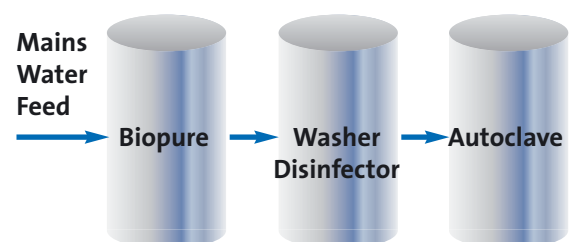

Incorporates UV and deionisation technology in addition to reverse osmosis (RO) to ensure the highest purity of water and meet the latest standards.

First Class after-sales service and support

Optional service and maintenance contracts to ensure maximum operational up-time and compliance with validation requirements.

Fits easily into a conventional dental cabinet

Biopure – the vital link between mains water and sterilization to ensure compliance with standards

The very highest quality control standards

Fits easily into a conventional dental cabinet

Optional dispensing gun for easier filling of autoclaves, washer disinfectors and manual washing

- **Easy-to-use monthly self disinfection programme**
 - Designed for ease-of-use by practice staff
- **Communication**
 - Interfaces via RS232 for communications and monitoring flexibility
 - Automated audio-visual alarms

- **Designed for Biopurity**
 - High efficiency RO for broad removal of impurities
 - Optipure purification cartridge improves inorganic quality in hard water areas and reduces endotoxin levels
 - Molecular Ultrafilter provides final microbial and endotoxin removal
 - UV sterilisation for continual bacterial destruction
 - Vent filter prevents atmospheric contamination of reservoir
 - Full recirculation of water within the system and wrap-around reservoir optimises microbial purity

Unrivalled after-sales service and support

ELGA is the United Kingdom's market leader in the provision of purified water systems for 'service critical' healthcare applications including, haemodialysis, sterile services and clinical chemistry analysers.

We offer a range of service contracts, including 4, 8, 12, 24 hour support, to ensure maximum system availability and cost-effectiveness. ELGA's network of dedicated service engineers guarantees the fastest possible response when you need technical support and supplies.
